Original Article

Abstract

Gulf of Mannar Ecosystem (GOME) covers an area spread over Rameswaram and Kanyakumari for about 19000 km² and lies between 78°11'E and 79°15' E longitude and 8°49'N and 9°15'N latitude. The 21 coral islands form a network of habitats for different kinds of fishes and marine organisms. Fish samples were collected during April 2005 to March 2010 from different centers *viz.*, Vembar, Tharuvakulam, Vellapatti, Therespuram, Tuticorin, Alangarathattu, Pazhaykayal, Punnakayal, Kayalpattinam, Veerapandiapattinam, Thiruchendur and Manappad of Gulf of Mannar ecosystem. The present check list was the first attempt to produce a systematic list of fishes found in the Gulf of Mannar ecosystem. It includes 476 genera and 1182 species in 144 families and 39 orders, of which 628 species have been recorded in the present study.

Key words: Marine fishes, marine protected area, coral islands, elasmobranchs, teleosts, deep sea fishes.

Introduction

India is blessed with a vast region of coral reefs and mangroves and these regions support very rich fauna of flora and constitute rich biodiversity of marine organisms. Gulf of Mannar Ecosystem (GOME) covers an area spread over Rameswaram and Kanyakumari to about 19,000 km². GOME lies between 78°11'00" E and 79°15'00" E longitude and 8°49'00" N and 9°15'00" N latitude. The GOME has within its limits the Gulf of Mannar Biosphere Reserve (GOMBR) which was declared in 1989 as a protected area with an area of 10,500 km² and a Gulf of Mannar National Park (GOMNP). The GOMNP included 21 Islands and surrounding coral reefs with an area of 560 km².

Fisheries is one of the most important renewable resources and provide livelihood for thousands of fishermen families residing in and around the coastal villages of the GOMBR. With increasing fishing pressure and conservation of the resources, the only option left for the sustainability of fisheries is their rational management. Proper management and conservation is possible with a thorough knowledge of the exact species identification and systematic list of the fish stocks present in the GOME.

GOME is known for its pearl oyster fisheries and chank fisheries since 1900 (Hornell, 1922). During 1975-1985 surveys conducted in the pearl oyster beds (Paars) revealed the decline in the population of pearl oyster. Several reasons were attributed to the decline of pearl oyster fishery in GOME such as shifting of sand by bottom currents caused by the southwest monsoon, natural enemies like fishes of Balistidae, *Lethrinus*, *Serranus*, *Tetradon*, *Rhinoptera javanica* and other groups like boring molluscs, sponges, starfishes and crabs. Besides the over fishing, and imbalance in male and female ratios in the growth of the population in the pearl oyster beds also causes for the decline of the resources (Herdman, 1903; Hornell, 1916; Devanesan and Chidambaram, 1956; Mahadevan and Nayar, 1973). The shift from pearl oyster fisheries to fin fish resources was gradual and got momentum when the mechanization and motorization of crafts and gears occurred during the five year plan period of India. Diversity of fin fishes of GOM areas is high and inventorying of the resources is important in the context of biodiversity conservation and sustainable utilization of the resources.

The 21 coral islands starting from north most Pamban Island to Kanayakumari forms a network of habitats for different kinds of fishes both resident and migratory. Hare Island is the

biggest island and is about seven km from Mandapam Camp having an area of 160 hectares and the smallest islands are Manoliputti Island, Pulivinchalli Island and Valimunai Island. Three rivers falling into GOM are Vembar, Thamaraparniyar and Vaipar forming estuaries in the GOM area. Important types of ecosystem are seagrass, seaweed, coral reefs and other habitats like rocky shore, sandy beach, muddy beach and mudflats. Due to the peculiarities of ecosystem and protective nature of the habitats several species of fishes undertake breeding migration to GOM area. Different species include pelagic, benthic, benthopelagic, deep sea, estuarine, brackish water, migratory and cave dwelling forms.

First report of the finfish species from GOM was during 1964 and contains a list of 265 fishes and the first attempt to bring out a checklist of fishes of GOM resulted in cataloging of about 300 species of fishes from GOM (Murty, 1969). In the past several attempts by different workers to study the fin fishes of GOME resulted in either listing of a group of fishes or fishes from a particular area or report of new records of a single species from this area (James, 1967; Thomas, 1969; Venkataramani & Ramaiyan, 1977; Williams & Venkataramani, 1978; James, 1985; Venkataramani *et al.*, 1995; Varghese, 2011; Varghese *et al.*, 2011; Zacharia *et al.*,

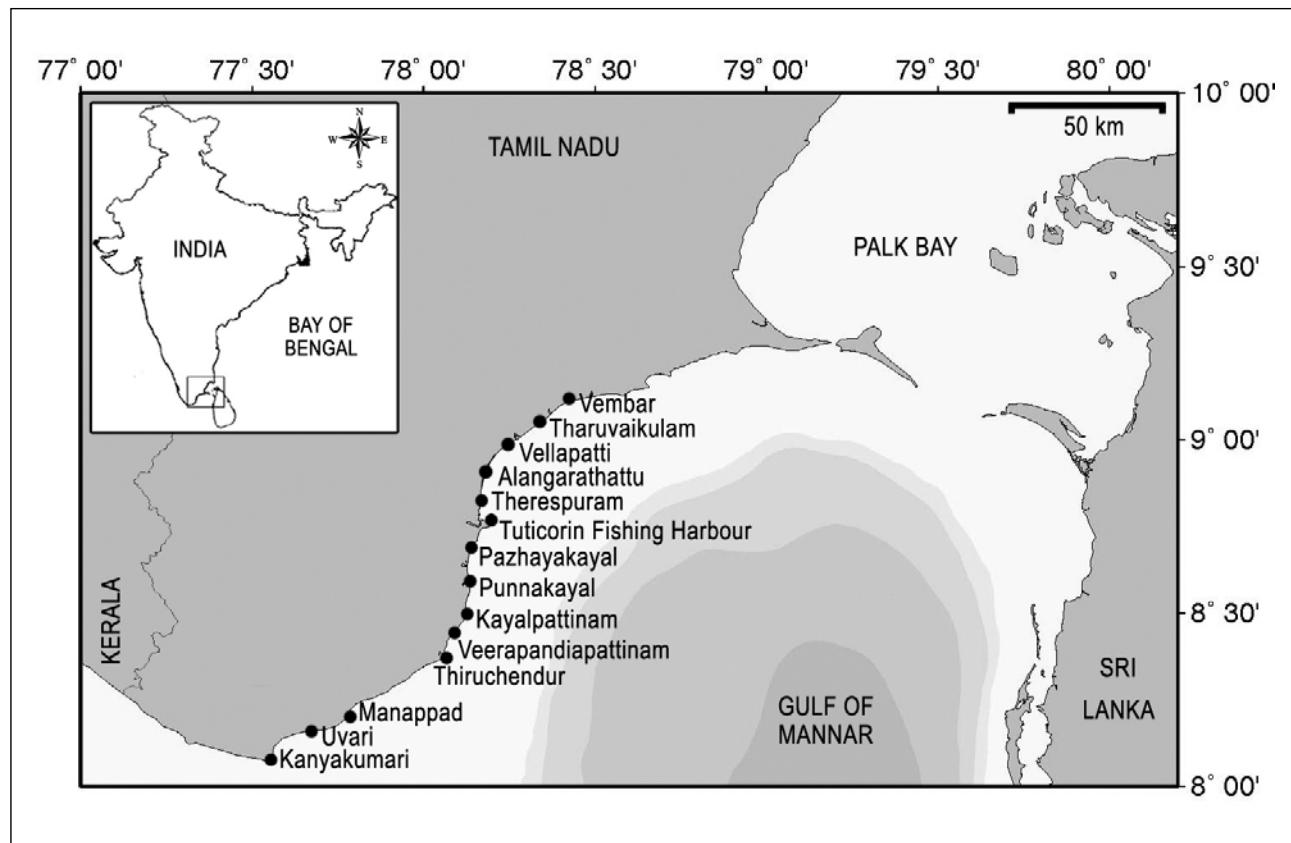

Fig. 1. Map showing study area of the Gulf of Mannar Ecosystem, India

2011; Joshi *et al.*, 2012b; Abraham *et al.*, 2011; Manisseri *et al.*, 2012; Zacharia and Kannan, 2012). Although these works added to the fish diversity of the GOM, a totality of species inventory is lacking and is causing problems for the conservation and management of this very important Marine Biosphere Reserve of the first of this kind in Tamil Nadu, India. In order to gather all the information, we have utilized all the taxonomical publications, reports, checked Eschmeyer (1998) and searched Catalog of Fishes (Eshmeyer and Fricke, 2015), Fishbase (Froese and Pauly, 2015) and other sites. The present check list was the first attempt to produce a systematic list of all the 1,182 species of fishes found in the Gulf of Mannar Ecosystem and adjacent areas of the Bay of Bengal. The ability to address the biodiversity utilization and conservation largely depends on the knowledge of the taxonomy of the flora and fauna constituting the biodiversity.

Material and methods

Sample collection

Fish samples were collected during April 2005 to March 2010. Sampling was conducted two to three consecutive days in a week from different centres like Vembar, Tharuvaikulam, Vellapatti, Therespuram, Tuticorin Harbour, Alangarathattu, Pazhaykayal, Punnakayal, Kayalpattinam, Veerapandiapattinam, Thiruchendur and Manappad of Gulf of Mannar Ecosystem (Fig. 1). Different types of gears were used for catching fish species from the GOME. Large meshed gillnets were used for catching species like tuna, seer fish, barracuda, and wolf herring. Small meshed gillnets were used for catching other types of species like sardine, mackerel, small carangids and miscellaneous species. Trawl nets were used for the exclusive fishery of different types and sizes of species from GOME. Gillnets of different names such as Nanduvalai, Chalavalai, Mayavalai, and Trammel net were also used to collect different varieties of marine organisms. Specialized trawl net "Thallumadi" was employed for catching fishes associated with seagrass beds and coral reef area where conventional trawl nets cannot operate smoothly. Shore seine of two types such as bigger nets (Karavalai) and smaller nets (Olavalai) were used in the near shore area to collect different species. Long lines were used to collect large pelagics from deeper areas. Hook and lines were used for catching species from the rocky shore areas and deeper waters. Besides, cast nets and traps were also used in certain places to collect fish samples. A total of 1,182 species of fishes was collected in the present study.

Species Identification

Identification of species was confirmed using standard Monographs and Fish Identification books (FAO Fish Identification sheets, Species Catalogue, Smith's Sea fishes).

In some cases photographs were sent to world authorities and the identification was confirmed. The classification as described by Nelson (2006) was followed. Nomenclature and taxonomical details were taken from the Catalog of Fishes (Eschmeyer, 1998). The present checklist contains a total of 1,182 species of fishes occurring in the GOM. The distributional details of some of the species which were not recorded in the present study was taken from the past studies (Day, 1878; Munro, 1955; Carpenter and Niem, 1998).

Species identification and systematic position of the fishes was done primarily using monographs and identification manuals (Cuvier and Valenciennes, 1828; Gunther, 1859-1970; Day, 1878; Day, 1888; Hamilton, 1822; Weber and deBeaufort, 1913-1940; Munro, 1955; Fischer and Whitehead, 1974; Jones and Kumaran, 1980; Talwar and Kacker, 1984; Smith and Heemstra, 1986; Talwar and Jhingran, 1991; Allen *et al.*, 1997; Carpenter and Niem, 1998; Eschmeyer, 1998). The taxonomic reviews and recent publications of Chen *et al.* (1994: Anguilliformes); Roberts and Vidhayanon (1991: Siluriformes); Becker (1968: Myctophids); Kawaguchi and Shimizu (1978: Myctophidae); Kotlyar (1987; 1996: Bercyformes); Cressey (1981: Synodontidae); Randall and Greenfield (1996: Holocentridae); Markle and Olney (1990: Carapidae); Heemstra (1980: Zeidae); Dawson (1985: Pipe fishes); Lourie *et al.* (1999: Sea horses); Imamura (1996: Platycephalidae); Knapp (1996: Platycephalidae); Anderson (1970: Lutjanidae); Heemstra and Randall (1993: Serranidae); Katayama (1960: Serranidae); Randall and Baldwin (1997: Serranidae); Randall and Heemstra (1991: Serranidae); Randall and McCosker (1992: Serranidae); Gon (1993: Apogonidae); Randall *et al.* (1985: Apogonidae); McKay (1992: Sillaginidae); Dooley (1978: Branchiostegidae and Malacanthidae); Randall *et al.* (1987: Pinjalo); Allen (1985: Lutjanidae); Carpenter (1987; 1988: Caesionidae); Carpenter and Allen (1989: Lethrinidae); Russell (1990: Nemipteridae); Trewavas (1977: Sciaenidae); Lal Mohan (1981: Sciaenidae); Thomas (1969: Goat fishes); James (1985: Silverbellies); Abraham *et al.* (2011: Silverbellies); James (1967: Ribbon fishes); Allen (1979: Butterfly and Angelfishes); Vari (1978: Teraponidae); Senon (1988: Mugilidae); Thomson (1997: Mugilidae); Allen (1991: Damsel fishes); Randall (1982: Hologymnosus); Bellwood (1994: Scaridae); Choat and Randall (1986: Scaridae); Starnes (1988: Priacanthidae); Springer (1971: Blenniidae); Springer and William (1994: Blenniidae); Hoese and Larson (1994: Valencienna); Murdy and Hoeses (1985: Gobiidae); Murdy (1989: Gobiidae); Kishimoto *et al.* (1988: Platax); Woodland (1990: Siganidae); Lin and Shao (1987: Sphyraenidae); Nakamura and Parin (1993: Snake Mackerel); Collette and Nauen (1983: Scombridae); Menon (1977: Cynoglossidae); Munroe and Marsh (1997: Symphurus); Leis (1978: Diodontidae); Sparks and Chakrabarty, 2007); Chakrabarty and Sparks (2007; 2008: Silverbellies);

Table 1. List of fish species occurring in the Gulf of Mannar Ecosystem, Tamil Nadu, India.

Group	Name
Class	ELASMOBRANCHII
Sub-class	HOLOCEPHALI
Order	CHIMAERIFORMES
Family	Chimaeridae (shortnose chimeras or ratfishes)
1	<i>Hydrolagus africanus</i> (Gilchrist, 1922)
Family	Rhinochimaeridae (longnose chimeras)
2	<i>Neoharriotta pinnata</i> (Schnakenbeck, 1931)
3	<i>Rhinochimaera pacifica</i> (Mitsukuri, 1895)
Sub-class	ELASMOBRANCHII
Sub-division	SELACHII
Order	HEXANCHIFORMES
Family	Hexanchidae (cow sharks)
4	<i>Hexanchus griseus</i> (Bonnaterre, 1788)
Order	HETERODONTIFORMES
Family	Heterodontidae (horned sharks)
5	<i>Heterodontus zebra</i> (Gray, 1831)
Order	ORECTOLOBIFORMES
Family	Parascylliidae (collard carpet sharks)
6	<i>Cirrhoscyllium expolitum</i> Smith & Radcliffe, 1913
Family	Hemiscylliidae (bamboo sharks)
7	<i>Chiloscyllium indicum</i> (Gmelin, 1789)
8	<i>Chiloscyllium griseum</i> Muller & Henle, 1838
Family	Stegostomatidae (zebra sharks)
9	<i>Stegostoma fasciatum</i> (Hermann, 1783)
Family	Ginglymostomatidae (nurse sharks)
10	<i>Nebrius ferrugineus</i> (Lesson, 1831)
Family	Rhincodontidae (whale sharks)
11	<i>Rhincodon typus</i> Smith, 1828
Order	LAMNIFORMES
Family	Alopiidae (thresher sharks)
12	<i>Alopias pelagicus</i> Nakamura, 1935
13	<i>Alopias superciliosus</i> Lowe, 1841
14	<i>Alopius vulpinus</i> (Bonnaterre, 1788)
Family	Lamnidae (mackerel sharks)
15	<i>Lamna nasus</i> (Springer, 1973)
16	<i>Carcharodon carcharias</i> (Linnaeus, 1758)
Family	Pseudocarcharhinidae (crocodile sharks)
17	<i>Pseudocarcharias kamoharai</i> (Matsubara, 1936)
18	<i>Isurus oxyrinchus</i> Rafinesque, 1850
Order	CARCHARHINIFORMES
Family	Carcharhinidae (gray sharks)
19	<i>Carcharhinus altimus</i> (Springer, 1950)
20	<i>Carcharhinus amboinensis</i> (Muller & Henle, 1839)
21	<i>Carcharhinus amblyrhynchos</i> (Whitley, 1934)
22	<i>Carcharhinus amblyrhynchos</i> (Bleeker, 1856)
23	<i>Carcharhinus brevipinna</i> (Muller & Henle, 1841)
24	<i>Carcharhinus dussumieri</i> (Muller & Henle, 1841)

25	<i>Carcharhinus falciformis</i> (Muller & Henle, 1841)
26	<i>Carcharhinus hemiodon</i> (Muller & Henle, 1839)
27	<i>Carcharhinus leucas</i> (Valenciennes, 1839)
28	<i>Carcharhinus limbatus</i> (Muller & Henle, 1839)
29	<i>Carcharhinus longimanus</i> (Poey, 1861)
30	<i>Carcharhinus macloti</i> (Muller & Henle, 1839)
31	<i>Carcharhinus melanopterus</i> (Quoy & Gaimard, 1824)
32	<i>Carcharhinus obscurus</i> (Lesueur, 1818)
33	<i>Carcharhinus plumbeus</i> (Nardo, 1827)
34	<i>Carcharhinus sealei</i> (Pietschmann, 1916)
35	<i>Carcharhinus sorrah</i> (Muller & Henle, 1839)
36	<i>Galeocerdo cuvieri</i> (Lesuer, 1818)
37	<i>Lamiopsis temmincki</i> (Muller & Henle, 1839)
38	<i>Loxodon macrorhynchos</i> (Muller & Henle, 1839)
39	<i>Negaprion acutidens</i> (Rüppell, 1837)
40	<i>Prionace glauca</i> (Linnaeus, 1758)
41	<i>Rhizoprionodon acutus</i> (Rüppell, 1837)
42	<i>Rhizoprionodon oligolinx</i> Springer, 1964
43	<i>Scoliodon laticaudus</i> (Muller & Henle, 1839)
44	<i>Triaenodon obesus</i> (Rüppell, 1837)
Family	Sphyrnidae (hammerheaded shark)
45	<i>Eusphyra blochii</i> (Cuvier, 1816)
46	<i>Sphyrna lewini</i> (Griffith & Smith, 1834)
47	<i>Sphyrna mokarran</i> (Rüppell, 1837)
48	<i>Sphyrna zygaena</i> (Linnaeus, 1758)
Order	ECHINORHINIFORMES
Family	Echinorhinidae (bramble shark)
49	<i>Echinorhinus brucus</i> (Bonnaterre, 1788)
Order	SQUALIFORMES
Family	Squalidae (dogfishes)
50	<i>Squalus acanthias</i> Linnaeus, 1758
51	<i>Squalus blainville</i> (Risso, 1827)
Family	Centrophoridae (gulper sharks)
52	<i>Centrophorus granulosus</i> (Bloch & Schneider, 1801)
53	<i>Centrophorus uyato</i> (Rafinesque, 1810)
54	<i>Centrophorus moluccensis</i> (Bleeker, 1860)
Sub-division	BATOIDEA
Order	PRISTIFORMES
Family	Pristidae (swordfishes)
55	<i>Anoxypristes cuspidata</i> (Latham, 1794)
56	<i>Pristis microdon</i> Latham, 1794
57	<i>Pristis pectinata</i> Latham, 1794
58	<i>Pristis zijsron</i> Bleeker, 1851
Order	TORPEDINIFORMES
Family	Torpedinidae (electric rays)
59	<i>Narcine brunnea</i> Annandale, 1909
60	<i>Narcine indica</i> Henle, 1834
61	<i>Narcine timlei</i> (Bloch & Schneider, 1801)
62	<i>Narke dipterygia</i> (Bloch & Schneider, 1801)
63	<i>Torpedo marmorata</i> (Risso, 1810)

Order	RAJIFORMES
Family	Rhinobatidae (guitarfishes)
64	<i>Rhinobatos granulatus</i> (Cuvier, 1829)
65	<i>Rhinobatos variegatus</i> Nair & Lal Mohan, 1973
66	<i>Rhinobatos annandalei</i> (Norman, 1926)
67	<i>Rhinobatos obtusus</i> (Muller & Henle, 1841)
68	<i>Rhina aenyllostoma</i> Bloch & Schneider, 1801
69	<i>Rhyncobatus djiddensis</i> (Forsskål, 1775)
Family	Dasyatidae (sting rays)
70	<i>Dasyatis kuhli</i> (Muller & Henle, 1841)
71	<i>Dasyatis microps</i> (Annandale, 1908)
72	<i>Dasyatis sephen</i> (Forsskål, 1775)
73	<i>Dasyatis zugei</i> (Burger, 1841)
74	<i>Himantura imbricata</i> (Bloch & Schneider, 1801)
75	<i>Himantura bleekeri</i> (Blyth, 1860)
76	<i>Himantura gerrardi</i> (Grey, 1851)
77	<i>Himantura jenkinsii</i> (Annandale, 1909)
78	<i>Himantura marginata</i> (Blyth, 1860)
79	<i>Himantura uarnak</i> (Gmelin, 1789)
80	<i>Himantura walga</i> (Muller & Henle, 1841)
81	<i>Himantura undulata</i> (Bleeker, 1852)
82	<i>Pteroplatytrygon violacea</i> (Bonaparte, 1832)
83	<i>Taeniura lymma</i> (Forsskål, 1775)
84	<i>Taeniura meyenii</i> Muller & Henle, 1841
85	<i>Urogymnus granulatus</i> (Macleay, 1883)
86	<i>Urogymnus asperimus</i> (Bloch & Schneider, 1801)
Family	Gymnuridae (butterfly rays)
87	<i>Gymnura japonica</i> (Temminck & Schlegel, 1850)
88	<i>Gymnura poecilura</i> (Shaw, 1804)
89	<i>Gymnura micrura</i> (Bloch & Schneider, 1801)
Family	Myliobatidae (angle, devil, cownose rays)
90	<i>Aetobatus flagellum</i> (Bloch & Schneider, 1801)
91	<i>Aetobatus narinari</i> (Euphrasen, 1790)
92	<i>Aetomylaeus nichofii</i> (Bloch & Schneider, 1801)
93	<i>Manta birostris</i> (Walbaum, 1792)
94	<i>Mobula diabolus</i> (Shaw, 1804)
95	<i>Mobula mobular</i> (Bonnaterre, 1788)
96	<i>Mobula thurstoni</i> (Lloyd, 1908)
97	<i>Myliobatus maculatus</i> Gray, 1834
98	<i>Rhinoptera jayakari</i> Boulenger, 1895
99	<i>Rhinoptera javanica</i> (Muller & Henle, 1841)
Class	ACTINOPTERYGII (OSTEICHTHYES)
Sub-class	NEOPTERYGII
Division	TELEOSTEI
Order	ELOPIFORMES
Family	Elopidae (ten pounders)
100	<i>Elops saurus</i> Linnaeus, 1766
101	<i>Elops machnata</i> (Forsskål, 1775)
Family	Megalopidae (tarpons)
102	<i>Megalops cyprinoides</i> (Broussonet, 1782)

Order	ALBULIFORMES
Sub order	Albulidae
Family	Albulidae (bonefishes)
103	<i>Albula vulpes</i> (Linnaeus, 1758)
104	<i>Albula neoguinaica</i> Cuvier & Valenciennes, 1847
Order	ANGUILLIFORMES
Sub order	Anguilloidei
Family	Anguillidae (freshwater eels)
105	<i>Anguilla bicolor</i> McClelland, 1844
106	<i>Anguilla nebulosa</i> McClelland, 1844
107	<i>Anguilla bengalensis</i> (Gray, 1831)
Sub order	Muraenoidei
Family	Muraenidae (morays)
108	<i>Echidna nebulosa</i> (Ahl, 1789)
109	<i>Echidna zebra</i> (Shaw, 1797)
110	<i>Gymnothorax javanicus</i> (Bleeker, 1859)
111	<i>Gymnothorax favagineus</i> Bloch & Schneider, 1801
112	<i>Gymnothorax flavimarginatus</i> (Rüppell, 1830)
113	<i>Gymnothorax meleagris</i> (Shaw, 1795)
114	<i>Gymnothorax octaviana</i> (Myers & Wade, 1941)
115	<i>Gymnothorax pictus</i> (Ahl, 1789)
116	<i>Gymnothorax rueppelliae</i> (McClelland, 1844)
117	<i>Gymnothorax thyroideus</i> (Richardson, 1845)
118	<i>Gymnothorax undulatus</i> (Lacepède, 1803)
119	<i>Strophidon sathete</i> (Hamilton, 1822)
120	<i>Thyrsidea macrura</i> (Bleeker, 1854)
121	<i>Uropterygius concolor</i> Rüppell, 1838
Sub order	Congoidei
Family	Congridae (conger eels, garden eels)
122	<i>Ariosoma anago</i> (Temminck & Schlegel, 1846)
123	<i>Ariosoma anagooides</i> (Bleeker, 1853)
124	<i>Ariosoma marginatum</i> (Vaillant & Sauvage, 1875)
125	<i>Conger cinereus</i> Rüppell, 1871
126	<i>Conger japonicus</i> Bleeker, 1879
127	<i>Paraconger macrops</i> (Günther, 1870)
128	<i>Paraconger notialis</i> Kanazawa, 1961
129	<i>Rhynchoconger nitens</i> (Jordan & Bollman, 1890)
130	<i>Uroconger lepturus</i> (Richardson, 1845)
Family	Ophichthidae (snake eels)
131	<i>Caecula pterygera</i> Vahl, 1794
132	<i>Lamnostoma orientalis</i> (McClelland, 1844)
133	<i>Pisodonophis boro</i> (Hamilton, 1822)
134	<i>Pisodonophis cancrivorus</i> (Richardson, 1848)
Family	Muraenesocidae (pike congers)
135	<i>Muraenesox cinereus</i> (Forsskål, 1775)
136	<i>Congresox talabanooides</i> (Bleeker, 1852)
137	<i>Congresox talabon</i> (Cuvier, 1829)

Order	CLUPEIFORMES
Sub order	Clupeoidei
Family	Pristigasteridae (pristigasterids)
138	<i>Hilsa ilisha</i> (Hamilton, 1822)
139	<i>Hilsa keele</i> (Cuvier, 1829)
140	<i>Hilsa toli</i> (Valenciennes, 1847)
141	<i>Ilisha elongata</i> Bennett, 1830
142	<i>Ilisha melastoma</i> (Bloch & Schneider, 1801)
143	<i>Ilisha sirishae</i> Seshagiri Rao, 1975
144	<i>Ilisha striatula</i> Wongratana, 1983
145	<i>Pellona dayi</i> Wongratana, 1983
Family	Engraulidae (anchovies)
146	<i>Coilia borneensis</i> Bleeker, 1852
147	<i>Coilia dussumieri</i> Valenciennes, 1848
148	<i>Coilia neglecta</i> Whitehead, 1968
149	<i>Encrasicholina punctifer</i> Fowler, 1938
150	<i>Encrasicholina devisi</i> (Whitley, 1940)
151	<i>Encrasicholina heteroloba</i> (Rüppell, 1837)
152	<i>Engraulis macrops</i> Kishinouye, 1911
153	<i>Setipinna melanochir</i> (Bleeker, 1849)
154	<i>Setipinna taty</i> (Valenciennes, 1848)
155	<i>Setipinna tenuifilis</i> (Valenciennes, 1848)
156	<i>Stolephorus dubiosus</i> Wongratana, 1983
157	<i>Stolephorus commersonii</i> Lacepède, 1803
158	<i>Stolephorus devisi</i> (Whitley, 1940)
159	<i>Stolephorus indicus</i> (van Hasselt, 1823)
160	<i>Stolephorus waitei</i> Jordan & Seale, 1926
161	<i>Thryssa hamiltonii</i> (Gray, 1835)
162	<i>Thryssa dayi</i> Wongratana, 1983
163	<i>Thryssa dussumieri</i> (Valenciennes, 1848)
164	<i>Thryssa malabarica</i> (Bloch, 1795)
165	<i>Thryssa mystax</i> (Bloch & Schneider, 1801)
166	<i>Thryssa purava</i> (Hamilton, 1822)
167	<i>Thryssa setirostris</i> (Broussonet, 1782)
Family	Chirocentridae (wolf herrings)
168	<i>Chirocentrus dorab</i> Forsskål, 1775
169	<i>Chirocentrus nudus</i> Swainson, 1839
Family	Clupeidae (herrings, sardines)
170	<i>Amblygaster clupeoides</i> (Bleeker, 1849)
171	<i>Amblygaster leiogaster</i> (Valenciennes, 1847)
172	<i>Anodontostoma chacunda</i> (Hamilton, 1822)
173	<i>Dussumieria acuta</i> Valenciennes, 1847
174	<i>Dussumieria elopsooides</i> Bleeker, 1849

990	<i>Cubiceps whiteleggi</i> (Waite, 1894)
Family	Samaridae (crested flounders)
991	<i>Samaris cristatus</i> Gray, 1831
992	<i>Samariscus triocellatus</i> Woods, 1960
993	<i>Samariscus longimanus</i> Norman, 1927

¹Synonym: *Makaira indica* (Cuvier, 1832)

994	<i>Samariscus huysmani</i> Weber, 1913
Family	Ateleopodidae (jellynosefishes)
995	<i>Ateleopus indicus</i> Alcock, 1891
996	<i>Ijimaia loppei</i> Roule, 1922
Family	Ammodytidae (sandlances)
997	<i>Bleekeria kallolepis</i> (Günther, 1829)
998	<i>Bleekeria murtii</i> Joshi, Zacharia & Kanthan, 2012
Family	Blenniidae (combtooth blennies)
999	<i>Blenniella cyanostigma</i> (Bleeker, 1849)
1000	<i>Ecsenius bicolor</i> (Day, 1888)
1001	<i>Ecsenius frontalis</i> (Valenciennes, 1836)
1002	<i>Entomacrodus striatus</i> (Valenciennes, 1836)
1003	<i>Haplogenys bipunctata</i> (Day, 1876)
1004	<i>Omobranchus elongatus</i> (Peters, 1855)
1005	<i>Omobranchus zebra</i> (Bleeker, 1868)
1006	<i>Petrosirtes breviceps</i> (Valenciennes, 1836)
1007	<i>Petrosirtes variabilis</i> Cantor, 1849
1008	<i>Salarias fasciatus</i> (Bloch, 1786)
Family	Gobiidae (gobies)
1009	<i>Acentrogobius audax</i> Smith, 1959
1010	<i>Acentrogobius caninus</i> (Valenciennes, 1837)
1011	<i>Acentrogobius ennoensis</i> Menon & Remadevi, 1980
1012	<i>Acentrogobius janthinopterus</i> (Bleeker, 1853)
1013	<i>Acentrogobius masoni</i> (Day, 1873)
1014	<i>Acentrogobius nebulosus</i> (Forsskål, 1775)
1015	<i>Amblyeleotris diagonalis</i> Polunin & Lubbock, 1979
1016	<i>Amblyeleotris guttata</i> (Fowler, 1938)
1017	<i>Amblyeleotris gymnocephala</i> (Bleeker, 1853)
1018	<i>Amblyeleotris steinitzi</i> (Klausewitz, 1974)
1019	<i>Amblyeleotris wheeleri</i> (Polunin & Lubbock, 1977)
1020	<i>Amblygobius albimaculatus</i> (Rüppell, 1830)
1021	<i>Amblygobius decussatus</i> (Bleeker, 1835)
1022	<i>Amblygobius phalaena</i> (Valenciennes, 1837)
1023	<i>Amblygobius sphynx</i> (Valenciennes, 1837)
1024	<i>Amoya madraspatensis</i> (Day, 1868)
1025	<i>Bathygobius cotticeps</i> (Steindachner, 1879)
1026	<i>Bathygobius fuscus</i> (Rüppell, 1830)
1027	<i>Bathygobius ostreicola</i> (Chaudhuri, 1916)
1028	<i>Boleophthalmus birdsongi</i> Murdy, 1989
1029	<i>Boleophthalmus boddarti</i> (Pallas, 1770)
1030	<i>Callogobius hasseltii</i> (Bleeker, 1851)
1031	<i>Gobiodon citrinus</i> (Rüppell, 1838)
1032	<i>Gobiooides broussonnetii</i> (Lacepède, 1800)
1033	<i>Gobius bontii</i> Bleeker, 1849
1034	<i>Oligolepis acutipennis</i> (Valenciennes, 1837)
1035	<i>Parachaeturichthys polynema</i> (Bleeker, 1853)
1036	<i>Priolepis semidoliata</i> (Valenciennes, 1837)
1037	<i>Psammogobius biocellatus</i> (Valenciennes, 1837)

1038	<i>Pseudogobius javanicus</i> (Bleeker, 1856)
Order	PLEURONECTIFORMES
Family	Psettodidae (righteye flounders)
1039	<i>Psettodes erumei</i> (Bloch & Schneider, 1801)
Family	Paralichthyidae (large-tooth flounders)
1040	<i>Pseudorhombus annulatus</i> Norman, 1927
1041	<i>Pseudorhombus argus</i> Weber, 1913
1042	<i>Pseudorhombus arsius</i> (Hamilton, 1822)
1043	<i>Pseudorhombus duplocinctellus</i> Regan, 1905
1044	<i>Pseudorhombus elevatus</i> Ogilby, 1912
1045	<i>Pseudorhombus javanicus</i> (Bleeker, 1853)
1046	<i>Pseudorhombus megalops</i> Fowler, 1934
1047	<i>Pseudorhombus micrognathus</i> Norman, 1927
1048	<i>Pseudorhombus natalensis</i> Gilchrist, 1905
1049	<i>Pseudorhombus triocellatus</i> (Bloch & Schneider, 1801)
Family	Bothidae (lefteye flounders)
1050	<i>Arnoglossus tapeinosoma</i> (Bleeker, 1865)
1051	<i>Arnoglossus waitei</i> Norman, 1926
1052	<i>Bothus bleekeri</i> Steindachner, 1861
1053	<i>Bothus myriaster</i> (Temminck & Schlegel, 1846)
1054	<i>Bothus pantherinus</i> (Rüppell, 1830)
1055	<i>Chascanopsetta megastoma</i> Kamohara, 1936
1056	<i>Chascanopsetta lugubris</i> Alcock, 1894
1057	<i>Chascanopsetta prognatha</i> Norman, 1939
1058	<i>Engyprosodon grandisquama</i> (Temminck & Schlegel, 1846)
1059	<i>Engyprosodon macrolepis</i> (Regan, 1908)
Family	Soleidae (soles)
1060	<i>Aesopis cornuta</i> Kaup, 1858
1061	<i>Brachirus annularis</i> Fowler, 1934
1062	<i>Brachirus orientalis</i> (Bloch & Schneider, 1801)
1063	<i>Brachirus pan</i> (Hamilton, 1822)
1064	<i>Heteromycteris oculus</i> (Alcock, 1889)
1065	<i>Pardachirus marmoratus</i> (Lacepède, 1802)
1066	<i>Solea elongata</i> Day, 1877
1067	<i>Solea ovata</i> Richardson, 1846
1068	<i>Synaptura commersonii</i> (Lacepède, 1802)
1069	<i>Synaptura marginata</i> Boulenger, 1900
1070	<i>Zebrias synapturoides</i> (Jenkins, 1910)
1071	<i>Zebrias quagga</i> (Kaup, 1858)
1072	<i>Zebrias zebra</i> (Bloch, 1787)
Family	Cynoglossidae (tonguefishes)
1073	<i>Cynoglossus arel</i> (Bloch & Schneider, 1801)
1074	<i>Cynoglossus bilineatus</i> (Lacepède, 1802)
1075	<i>Cynoglossus brachycephalus</i> Bleeker, 1870
1076	<i>Cynoglossus carpenteri</i> Alcock, 1889
1077	<i>Cynoglossus cynoglossus</i> (Hamilton, 1822)
1078	<i>Cynoglossus dispar</i> Day 1877
1079	<i>Cynoglossus dubius</i> Day 1873
1080	<i>Cynoglossus lida</i> (Bleeker, 1851)
1081	<i>Cynoglossus lingua</i> Hamilton, 1822

1082	<i>Cynoglossus microlepis</i> (Bleeker, 1851)
1083	<i>Cynoglossus macrostomus</i> Norman, 1928
1084	<i>Cynoglossus puniticeps</i> (Richardson, 1846)
1085	<i>Cynoglossus semifasciatus</i> Day, 1877
1086	<i>Paraplagusia bilineata</i> (Bloch, 1787)
1087	<i>Paraplagusia blochii</i> (Bleeker, 1851)
1088	<i>Syphurus trifasciatus</i> (Alcock, 1894)
1089	<i>Syphurus macrophthalmus</i> Norman, 1939
1090	<i>Syphurus ocellatus</i> von Bonde, 1922
Order	TETRAODONTIFORMES
Family	Triacanthodidae (spikefishes)
1091	<i>Triacanthodes anomalus</i> (Temminck & Schlegel, 1850)
1092	<i>Triacanthodes ethiops</i> Alcock, 1894
Family	Triacanthidae (tripodfishes)
1093	<i>Triacanthus biaculeatus</i> (Bloch, 1971)
1094	<i>Triacanthus brevirostris</i> (Temminck & Schlegel, 1850)
1095	<i>Pseudotriacanthus strigilifer</i> (Cantor, 1849)
Family	Balistidae (triggerfishes)

Chakrabarty *et al.* (2008; 2010: Silverbellies); Joshi *et al.* (2011 : Carangidae) and Joshi *et al.* (2012 a: Tuna) were useful in the compilation and preparation of systematic list of fishes in the present study.

Results and discussion

The study revealed the presence of 1,182 fish species belonging to 476 genera, 144 families and 39 orders in the Gulf of Mannar Ecosystem (Table 1). Of these 628 species were collected and identified in the present study. Details of the 554 species were taken from the past studies conducted in the GOME by earlier workers (James, 1967; Murty, 1969; Thomas, 1969; Venkataramani & Ramaiyan, 1977; Williams & Venkataramani, 1978; James, 1985; Venkataramani *et al.*, 1995; Abdussamad *et al.*, 2006; Varghese *et al.*, 2011; Varghese, 2011; Zacharia *et al.*, 2011; Joshi *et al.*, 2012b, Mannisseri *et al.*, 2012; Zacharia and Kannan, 2012).

Pioneering studies on the taxonomy of Indian fishes began in the late 18th century by European scientists and officers of the British East India Company. One of the pioneers was Bloch (1795), and his student Schneider (Bloch and Schneider, 1801), followed by Lacepede (1798-1803). In 1794, Dr. Buchanan Hamilton, Superintendent of the Botanical gardens, Calcutta, took up a study of the fishes of the Ganges, and completed after 28 years (Hamilton, 1822) which was probably the first official catalogue of Indian fishes. Hamilton was followed by Cuvier and Valenciennes (1828) and Gunther (1859). Dr. Alcock who undertook the first marine fisheries survey in India published the findings in 1869. Perhaps the most important work during this period, pertaining to the subject was that of Sir Francis Day, Surgeon Major with the British troops in Bengal, who studied the systematics of Indian fishes in depth for over 20 years. His monumental work was published in two volumes as the 'The Fishes of India: being a natural history of the fishes known to inhabit the seas and fresh waters of India' Vol. I and II (1878) and the 'The Fauna of

British India, including Ceylon and Burma' (1889). During the subsequent period of one century, a large number of fishes have been described and added to the list prepared by Day. The important works during this period with regard to the taxonomy of fishes of the Indian waters are by Munro (1955), Jones and Kumaran (1980), who published descriptions of over 600 species from Laccadives archipelago, Talwar and Kacker (1984), and the most recent compilation of Talwar and Jhingran (1991), who published descriptions of a total of 930 species of inland (fresh and brackishwater) fishes of India.

GOMBR has a coastal line of 300 km and 10 km wide with a buffer zone on either side of the coastal zone (Melkani *et al.*, 2006). The GOMNP is under the jurisdiction of the Wildlife Protection Act of India (1972) which prevents illegal activities in the Park. The National Park was placed under the Management of Tamil Nadu Forest Department. United Nation Development Programme (UNDP) completed a GEF funded project on the conservation and sustainable use of the Gulf of Mannar Biosphere Reserve and coastal biodiversity with the cooperation of the Government of Tamil Nadu and Government of India. Thus this area now became one of the important Marine Protected Areas of the World.

Rhinopias eschmeyeri Condé, 1977 was recorded for the first time from Indian waters in the GOM (Varghese, 2011). Two specimens of this species were landed by trawlers during November, 2009. Pelagic stingray, *Pteroplatytrygon violacea* (Bonaparte, 1832) was recorded for the first time from the GOM of India (Zacharia *et al.*, 2012). A female specimen measuring 91 cm in TL was collected from the hooks and line landings from Tuticorin on 9th July 2009. The species might have been migrated from the populations available in the equator, along with the monsoon currents. Two populations of *P. violacea* were present in the Indian Ocean, one along the equator between Africa and Australia and another along the southeast coast of Australia. The species recorded from the Gulf of Mannar, might have dispersed or migrated either from the equator or from South Australian waters. The presence of *P. violacea* along the GOM area of the Indian coast can be attributed to the migration of this species from the equator population.

A new fish species of the genus *Bleekeria* were collected by trawl nets off Tuticorin of GOMBR from a depth of 20-30 m. *Bleekeria murtii* characterized by 34-39 dorsal rays, 12-16 anal rays, 80-108 lateral line scales, high head length (21.1-23.2 in SL), smaller eye diameter (2.45-5.37 mm) and high body height (8.7-19.7 mm). The species-specific characters, colour pattern and morphometric variations are described in detail (Joshi *et al.*, 2012b). *Ablabys binotatus* (Peters, 1855) was recorded for the first time from Indian

waters in the GOM (Varghese, 2013). One specimen of this rare species was collected from trawl landings during November, 2007. A new record on the occurrence of *Neobythites multistriatus* which hitherto had not been recorded from the Bay of Bengal is reported. Two specimens measuring 160 and 180 mm standard length were collected from the landings of a deep-sea trawler by-catch at depths of 200–250 m off the Tuticorin coast in the Gulf of Mannar (part of the Bay of Bengal) during March 2010 (Kannan *et al.*, 2013 a). *Neobythites stefanovi* is recorded for the first time from Indian waters in the Gulf of Mannar (Kannan *et al.*, 2013 b). Two specimens were landed as by-catch in trawl gear at the Tuticorin fisheries harbor, southeast coast of India, in March 2010. This is also the first record of the species outside the Red Sea, Gulf of Oman and Gulf of Aden, in the western Indian Ocean. The taxonomy of tuna species of India is an attempt to provide adequate descriptions of all known species from Indian waters, and also to sort out various issues relating to identification of species (Joshi *et al.*, 2012 a). The description of the otolith and the photographs are of the first of its kind on the taxonomy of tuna species which shows species specific differences in morphology and structure. The results of studies on the otolith might provide information related to the taxonomy as well as other biological aspects of tuna species. Kannan *et al.* (2013 c; 2013 d) recorded twostripe goby (*Valenciennea helsdingenii*) and striated fusilier (*Caesio striata*) from the Gulf of Mannar which is the first record of its range extension from the known range within the Indian Ocean.

The present systematic list of 1182 species of fin fishes of the Gulf of Mannar is one of the prerequisites for the biodiversity conservation of the renewable resources which provides the livelihood for thousands of fishermen families residing in the coastal villages of GOMBR. For a meaningful study biodiversity loss, the knowledge of the natural history of the species is necessary and this inturn can be acquired by the correct identification of species. This assumes greater importance in tropical seas where, a multitude of closely related and morphologically similar species occur (Abraham *et al.*, 2011). The role of taxonomy, species list and proper identification cannot be overlooked in the studies of population dynamics and biodiversity conservation of GOME. The present results are also a step toward in understanding the bewildering biodiversity that characterizes the tropical seas.

This checklist of fishes with scientific names organized within a classification system will enhance the information on each species and provide more information to the stakeholders. This also has enormous value as it provides basic information required for inventory, conservation and sustainable use of

biodiversity of GOME. This checklist is a first step towards generating a comprehensive list of fish species from this ecosystem and will be updated regularly as new species/distributions are recorded.

Acknowledgements

The authors thank the Director, Central Marine Fisheries Research Institute and Scientist-in-Charge of the Tuticorin Research Centre of CMFRI for providing facilities and encouragement. The online GIS program MAPTOOL, provided by SEATURTLE.ORG is also acknowledged. The authors wish to express their gratitude towards Indian Council of Agricultural Research for funding the research work.
